

AP 500

Externally Mounted

The AP500, first introduced in 2006, has been adapted over the years and is the recognised market leader in the ambulance tail lift sector. The AP500 has been developed and designed in conjunction with both fleet managers and equipment operators to provide a reliable and easy to operate lift.

The XLAP 500 incorporates the following features;

- Externally-mounted 500kg capacity stretcher lift
- Suitable for box-body ambulances
- Aluminium slip-resistant platform surface
- LED lights mounted on both sides of platform
- Folding fixed-height or telescopic-height side safety handrails
- Twin Stainless steel handrails powder coated with stainless steel double lock hinge assembly
- 12V or 24V electro-hydraulic powerpack mounted on lift frame
- Fixed platform width, length and position customisable to suit customer requirements
- Powder-coated main framework
- Integrated aluminium bridging plate to span between platform and vehicle interior
- Two-speed platform stowage (slow final closure).
- Simple two-handed push button operation
- Manual over-ride system permits emergency operation.
- Two hydraulic rams 1 x Tilt and 1 x Lift (Anti-corrosive cylinders)
- "Mechanical" auto tilt at ground level
- Fully CE marked

All lift dimensions, control systems and operations are customisable to suit customer requirements.
