

# POP 500 Integrated Ramp

The POP500 is a manually operated stretcher ramp that was added to Access XL product range in 2014 to provide an integrated solution with minimal maintenance costs.

The POP 500 incorporates the following features;

- SWL Capacity 500Kg.
- The ramp is designed to form the rear right hand closure of the ambulance
- Manually operated with restricted rotational speed
- Rear frame assembly with single axis pivot shaft and a 2 x gas strut assisted deploy and recovery system
- Extruded Aluminium Ramp construction
- Aluminium plate with an anti-slip self-adhesive coated surface
- Fold out extending ramp to increase the total length to 2578mm
- LED lights are mounted in both sides of ramp
- Single manually operated pull handle positioned in the centre of the door
- Latched closed with twin lock catches located in the top of the ramp
- Pull down assist handle
- Fully CE marked
